

Claims 19 – 31, (Cancelled).

32. (Original) A method of moving a carbon nanotube which is attached by one end thereof, to a junction on a substrate, said method comprising:

 applying a charge to said carbon nanotube; and
 providing a repelling force to an adjacent structure from said carbon nanotube to which said charge has been applied.

33. (Original) The method of moving a carbon nanotube as recited in claim 32, wherein said junction comprises a nanoparticle.

34. (Original) The method of moving a carbon nanotube as recited in claim 32, wherein said junction comprises a catalyst.

35. (Original) The method of moving a carbon nanotube as recited in claim 32, wherein said junction comprises a metal.

36. (Original) The method of moving a carbon nanotube as recited in claim 32, wherein said junction is a metal oxide.

37. (Original) The method of moving a carbon nanotube as recited in claim 32, wherein said substrate comprises an array of depressions.

38. (Original) The method of moving a carbon nanotube as recited in claim 32, wherein said moving of said carbon nanotube comprises a bending of said nanotube.

39. (Original) The method of moving a carbon nanotube as recited in claim 32, wherein said adjacent structure comprises a further carbon nanotube.

40. (Original) The method of moving a carbon nanotube as recited in claim 32, including:

arranging an electrical terminal on said substrate; and
applying an electrical signal to said terminal.

Claims 41-57, (Cancelled).
